

background_queue

Background Work Queue (§11.4.140 BACKGROUND action, v2)

Revision: 1 **Created:** 2026-07-29 **Last modified:** 2026-07-29T00:30Z **Status:** active
Maintainer: CLI-agent main work stream

Durable, append-only, NEVER-dropped queue of BACKGROUND : : requests.

The BACKGROUND action’s expansion is explicit: **the moment** such a request is received it **MUST** be recorded here — with an id, a received-timestamp, a status and any blocker — so it can never be lost, dropped, or forgotten. It **MUST** then be executed: subagent-driven in parallel with all main work if capacity exists, otherwise left Queued with its blocker recorded, retried at the next opportunity **including the next fresh session**, and re-surfaced to the operator every session until it reaches a terminal state (Done or Operator-cancelled).

Two rules that shape this file:

- **Non-interrupting (v2).** A BACKGROUND request runs in PARALLEL with the main stream and must NOT interrupt, block, preempt, or divert it. If no genuine background capacity exists, the request stays Queued here rather than being run inline — running it inline would violate the action’s purpose.
- **Silently dropping, or deferring-and-forgetting, is FORBIDDEN.**

Composes §11.4.87 / §11.4.94 / §11.4.97 / §11.4.103 / §11.4.126.

Queue

#	Received (UTC)	Request	Tracked as
BG-001	2026-07-29T00:26Z	Fully incorporate the HelixSkills System (git@github.com:HelixDevelopment/skills.git) into HelixCode and HelixAgent — all power-features,	HXC-159 (Task, Qu fully_incorpora scheduling evidenc

#	Received (UTC)	Request	Tracked as
		nothing left out; exhaustive phase/task/subtask plan; full §11.4.169 test-type + Challenges + HelixQA coverage; all docs/manuals/guides/FAQs extended with illustrations, graphs and diagrams; every gap/weak-spot/danger-zone detected in advance during planning and paired with a rock-solid risk-free solution; progress tracked through continuation + memory/knowledge mechanisms; GitHub SpecKit for all phases, bridged to Superpowers, subagent-driven.	

Status vocabulary

Status	Meaning
Queued	Recorded, not yet started. A Blocker MUST be stated.
In-progress	Actively running in background, parallel to the main stream.
Blocked	Started or startable but externally blocked; Blocker states what and the retry condition. Re-attempted next opportunity, including next fresh session.
Done	Terminal. Reached a genuinely completed, evidence-backed state (§11.4.197 — never merely acknowledged).
Operator-cancelled	Terminal. Explicitly cancelled by the operator; the reason is recorded.

Honest boundary (§11.4.6): this queue guarantees a BACKGROUND request is never lost or forgotten. It does NOT by itself guarantee the work is correct — each request's output still crosses the same gates as any other change: independent review (§11.4.142 / §11.4.134), four-layer runtime-signature verification (§11.4.108), and the full-suite retest (§11.4.40). | BGQ-0001 | 2026-09-07T13:47+02:00 | in-progress | Dynamic on-demand Skill/extension activation so only skills needed at a given moment are active; token use always minimal; implemented in the constitution submodule so every project inherits it |

none — subagent dispatched | | BGQ-0002 | 2026-09-07T15:51+02:00 | in-progress
| Enumerate every operator-blocked item, blocker and show-stopper across the session and put them to the operator as interactive decisions so all can be unblocked | none — compiled and surfaced | | BGQ-0003 | 2026-09-08T14:12+02:00 | done | Delegate long mechanical work to properly written bash scripts / small Go utilities instead of burning tokens on it; scan every project regularly and refactor to extract such work; encode as a mandatory constitutional rule so all projects do it; full documentation, user guides, manuals, and tests producing deterministic machine evidence | DONE — §11.4.274 minted and published to all 6 constitution upstreams; constitution/scripts/mechanical/ landed at 1f67272 (15 files, 181 assertions, 6 suites). Acceptance was reproducing a MEASURED session outcome, not a synthetic one: MUTATION D5e: EXPECTED-FAIL got 23 failed / 35 passed [OK]. Five instrument defects were found and fixed while building it, two of them only on first real use against a 1.8 GB repository. | | BGQ-0004 | 2026-09-08T15:47+02:00 | in-progress | Enumerate every operator-blocked item, blocker and show-stopper across the session and the tracked sources, and put them to the operator as interactive decisions with options so all can be unblocked | none — compiled from evidence and surfaced |

BGQ-0005 — Sweep every operator-blocked item and blocker, and put them to the operator as options

Field	Value
Received	2026-09-08T17:16Z (19:16 CEST)
Status	in-progress
Blocker	none — executable now
Prefix	BACKGROUND :: CRITICAL

Operator asked for a complete sweep of operator-blocked items, blockers and show-stoppers, surfaced as interactive questions with options so every one can be decided and unblocked. Terminal when the operator has answered and each answer is recorded against its item.
